Professional Summary

Recent Data Science graduate with nearly one year of hands-on internship experience in AI research and engineering. Experienced in developing and evaluating machine learning, generative AI, multimodal retrieval, speech processing, recommendation, and vector search systems. Seeking an entry-level AI Engineer position to apply my technical foundation, continue developing practical engineering skills, and contribute to real-world AI products.

Education

Bachelor of Science in Data Science

University of Science, Vietnam National University Ho Chi Minh City

2022 – 2026

Ho Chi Minh City, Vietnam

- GPA: 3.6/4.0 (8.4/10)

Mathematics Specialized Program

Hung Vuong High School for the Gifted

2019 – 2022

Pleiku, Gia Lai, Vietnam

Experience

AI Research Intern

GlobalTech

Apr 2026 – Present

Ho Chi Minh City, Vietnam

- Conducted independent research on image and multimodal retrieval, including literature review, dataset selection, model evaluation, and experimental design.
- Developed reproducible benchmarking pipelines to compare recent embedding models using retrieval accuracy, inference performance, latency, and resource consumption.
- Built and evaluated vector search solutions with Milvus, and assessed the applicability of research findings to scalable retrieval workflows.

AI Intern / Team Lead

Pikatech and Analytics

Aug 2025 – Dec 2025

Ho Chi Minh City, Vietnam

- Led a seven-member team in developing **A2A School**, an AI-powered educational support system.
- Defined the technical direction, divided responsibilities, coordinated team progress, and supported members in resolving implementation blockers to complete the project's objectives.
- Developed generative AI features for document summarization and quiz generation, and contributed to backend services using FastAPI and MongoDB Atlas.

Selected Projects

A Decision Support Framework for Medical Papers Submission Recommendation | Python, PyTorch, 2025 – 2026

BioBERT, SPECTER, Qwen, LightGBM, Streamlit

- Co-developed a multi-stage decision support system that recommends suitable biomedical journals from paper titles, abstracts, and keywords, while providing evidence-based explanations for each recommendation.
- Fine-tuned BioBERT using supervised contrastive learning and built a baseline retriever to generate Top-N candidate journals for downstream reranking.
- Integrated LLM-based information extraction to construct structured paper and journal profiles, with schema validation, evidence grounding, retry mechanisms, and output normalization.
- Implemented Learning-to-Rank and baseline-aware reranking using neural RankNet and LambdaMART, and developed a Streamlit application to present recommendations, scores, and natural-language explanations.

AMITA – AI-powered Meeting Insight & Task Assistant | Faster-Whisper, Pyannote, Qwen3, FastAPI, React

2025

- Co-developed an end-to-end meeting analysis system that converts multi-speaker audio into speaker-aware transcripts, meeting summaries, action items, and structured insights.
- Integrated Faster-Whisper for Vietnamese speech recognition, Pyannote for speaker diarization, and a locally deployed Qwen3 model for summarization and task extraction.
- Designed a modular audio-processing pipeline with voice activity detection, audio chunking, transcript normalization, and structured JSON outputs for long meeting recordings.

- Evaluated speech recognition models using WER, CER, and inference time, and compared open-source LLMs for meeting summarization and action-item extraction.
- Source code: github.com/3sDont/AMITA_project

A2A School – AI Educational Support System | *Generative AI, FastAPI, MongoDB Atlas, Google Forms* **Aug 2025 – Nov 2025**

- Developed an AI-powered educational support system that helps teachers process learning materials, summarize documents, and automatically generate quizzes.
- Built FastAPI backend services and MongoDB Atlas data workflows to integrate document processing, AI generation, and result storage.
- Designed export pipelines that transformed generated quizzes into Google Forms-compatible and printable formats.
- Collaborated with a seven-member team to integrate AI and backend components into a functional application.
- Source code: github.com/0deHK/A2A_School

Technical Skills

Programming: Python, SQL, Bash, C, C++

Machine Learning: PyTorch, scikit-learn, Hugging Face Transformers, model fine-tuning, inference, and evaluation

Generative AI and Retrieval: Large Language Models, RAG, prompt engineering, embeddings, semantic search, multimodal retrieval, and Milvus

Backend and Deployment: FastAPI, REST APIs, MongoDB, PostgreSQL, Docker, Linux, Git, Streamlit, and vLLM

Activities

Member

2022 – 2026

Đội Sinh viên Tình nguyện Khoa Toán–Tin học

Ho Chi Minh City, Vietnam

- Participated in and supported the organization of volunteer activities across Ho Chi Minh City, providing assistance to elderly people, children, and people experiencing homelessness.
